To give you some background before the meeting, I am an Associate Professor in the Department of Electrical and Computer Engineering at the University of Illinois at Urbana-Champaign. My research team is studying information leaks to third parties on Web sites that display individual health information. We focused our attention on two categories of web sites: hospitals that use MyChart patient portals powered by Epic (a healthcare software company) and telehealth web sites.

We found 60 MyChart patient portals that use Google Analytics or Facebook Pixel to track visitors on their login pages (listed below). We checked the behaviors of these trackers by logging into some of those portals. We found that these trackers send the URLs and titles of the pages that patients visit, such as "Health Record: Blood Pressure", to Google and Facebook respectively. In addition, the Facebook Pixel tracker also sends the following data to Facebook: personal information, such as name, address, phone number, email, gender, and birthday; medications; plans of care, including upcoming lab tests; information about appointments, including dates, hospitals, and topics.

In addition to the information relating to medical treatment above, a user's Web browser may send Web cookies to Google and Facebook, which allow these companies to identify visitors to the hospital and telehealth web sites. For visitors who are logged in to Google and Facebook, the cookies are associated with their accounts, which include their name and email address. This makes the health information transmitted to Google and Facebook identifiable.

The following hospitals use both Facebook Pixel and Google Analytics on patient record pages. These represent the most severe case of information disclosure to third parties.
